

SPIN OUT

INSPIRED BY

DR. RICHARD GOODWIN
Turbulence

YOU WILL NEED:

A piece of strong paper, some wire or a pipe cleaner, 2 beads, bamboo skewer or hole puncher, scissors and wire cutters

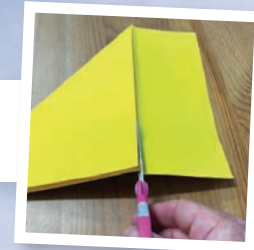

1

Fold a piece of paper diagonally from one corner to make a square. Fold the paper from the opposite corner diagonally.

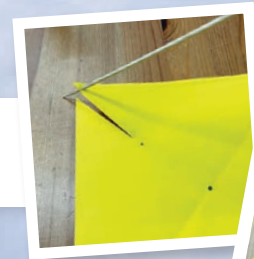

2

Cut along the diagonal fold lines halfway to the centre.

3

Make a hole in the middle and a hole in one corner of each segment.

4

Thread the wire through one of the beads.

5

Thread the wire through the centre hole with the bead at the back.

6

Going around the circle, fold each flap so the wire goes through each hole. Thread the wire through the remaining bead, and twist wire to secure.

7

Blow on it and watch it spin!
